

# Is your current insulin not controlling your Type 1 diabetes?

## Consider volunteering for a research study!

Are you having difficulty controlling your type 1 diabetes with your current insulin treatment? Researchers at the University of Alberta are investigating a once-daily injection of Toujeo™, a new type of longer-acting insulin for treating diabetes, and comparing it to your current long-acting insulin. You may qualify for this study if you:

- ✓ **Have Type 1 diabetes**
- ✓ **Are 18 years of age or older**
- ✓ **Have been using a twice-daily injection of long-acting insulin (Lantus®, Levemir®, or NPH insulin) and a meal-time (rapid-acting) insulin for the past year or longer**

If you are interested in participating or learning more about this research study, please contact **Amanda** at the Alberta Diabetes Institute Clinical Research Unit:

**Phone: 780-492-1098**  
**Email: [adicru@ualberta.ca](mailto:adicru@ualberta.ca)**

Your participation in this trial may help other people diagnosed with type 1 diabetes mellitus in the future.

If you qualify to participate you will receive trial-related medical care and the study drug Toujeo™ at no cost.
